What is *FLAC3D*?

- Continuum numerical modeling software for geotechnical analyses of soil, rock, groundwater, and ground support
- Used in civil, mining, geotechnical and petroleum engineering applications
- Analyses include engineering design, factor of safety prediction, research and testing, and back-analysis of failure

Applications

- Deformation and stability analysis of:
 - ❖ Slopes (embankments, open pit mines, rock and soil)
 - ❖ Tunnels (transportation tunnels, caverns, mining stopes)
 - ❖ Surface excavations (foundations, footings)
- Analysis of effectiveness of ground support
 - ❖ Cables, soil nails, tiebacks, piles
 - ❖ Liners, shotcrete
 - ❖ Geogrids, geotextiles
- Dynamic analysis
 - ❖ Earthquakes, liquefaction, rockbursts, microseismicity
- Faulted or jointed rock

How it works

- *FLAC3D* uses an explicit, finite volume formulation

FLAC3D 6.10

	Block=Block 45,Segment=Segment 3

Finite volume formulation does not require a regular grid – unstructured meshes are possible

Explicit solution

- Explicit “time-marching” scheme models changing boundary conditions by propagating information across the model in a realistic manner

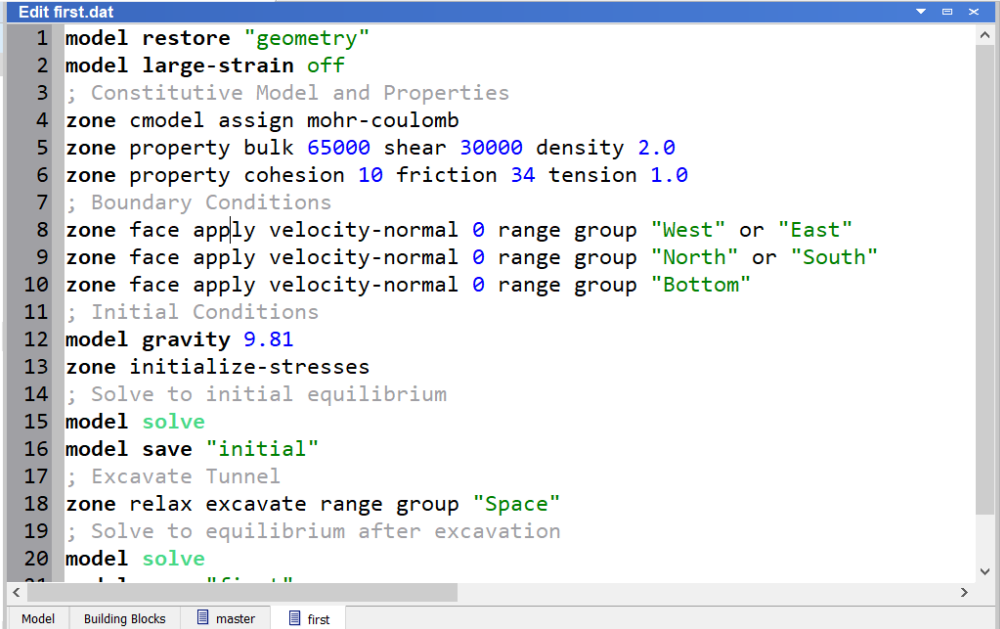

Explicit Solution Scheme

- Models physically unstable processes without numerical instability
- Explicit approach is good for:
 - ❖ Dynamics
 - ❖ Highly non-linear material behavior (e.g. strain softening)
 - ❖ Large strain
 - ❖ Severe instability (yield/failure over large area, total collapse)
- Explicit approach is less good for:
 - ❖ Elastic or near-elastic models

FLAC3D is (mostly) command driven

Why?

- Provides high level of flexibility and power without proliferation of buttons and menus
- Repeatability
- Easy to perform parameter studies
- Easy to add scripting

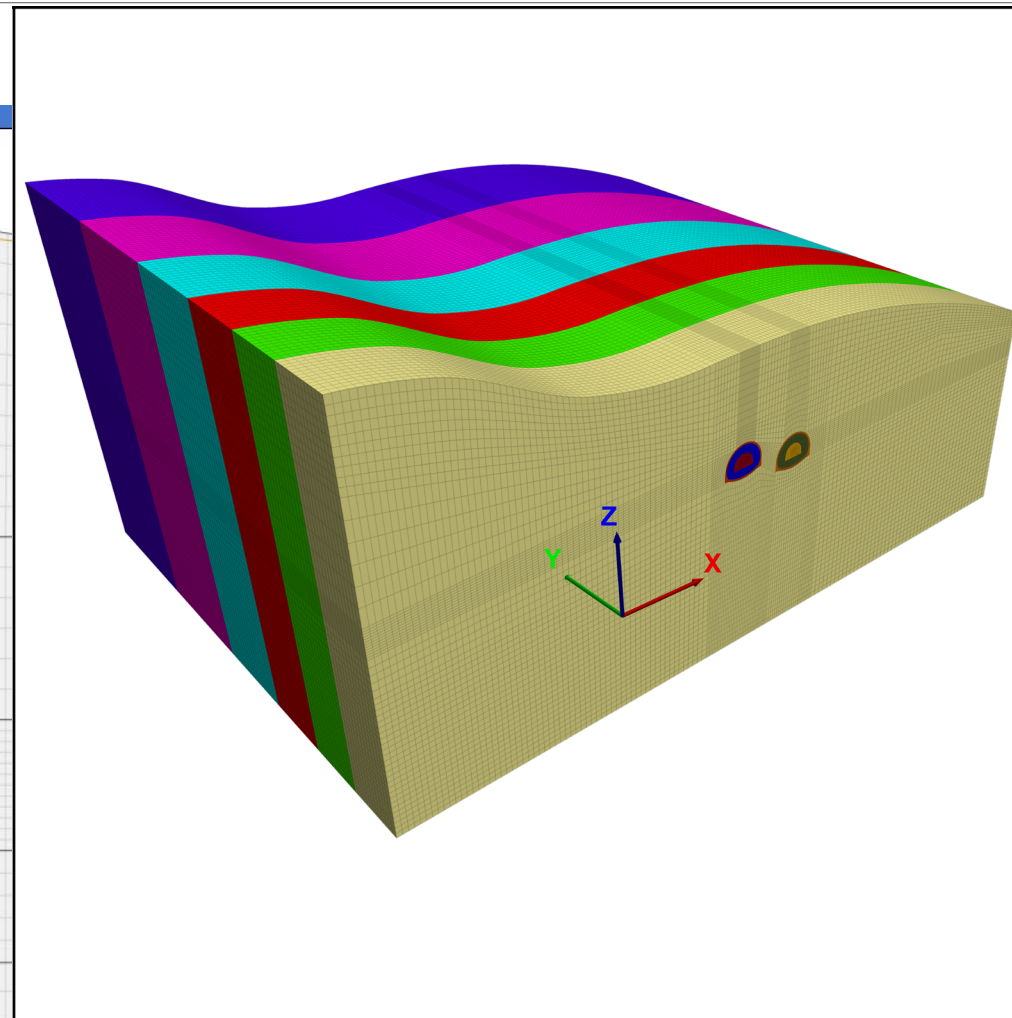

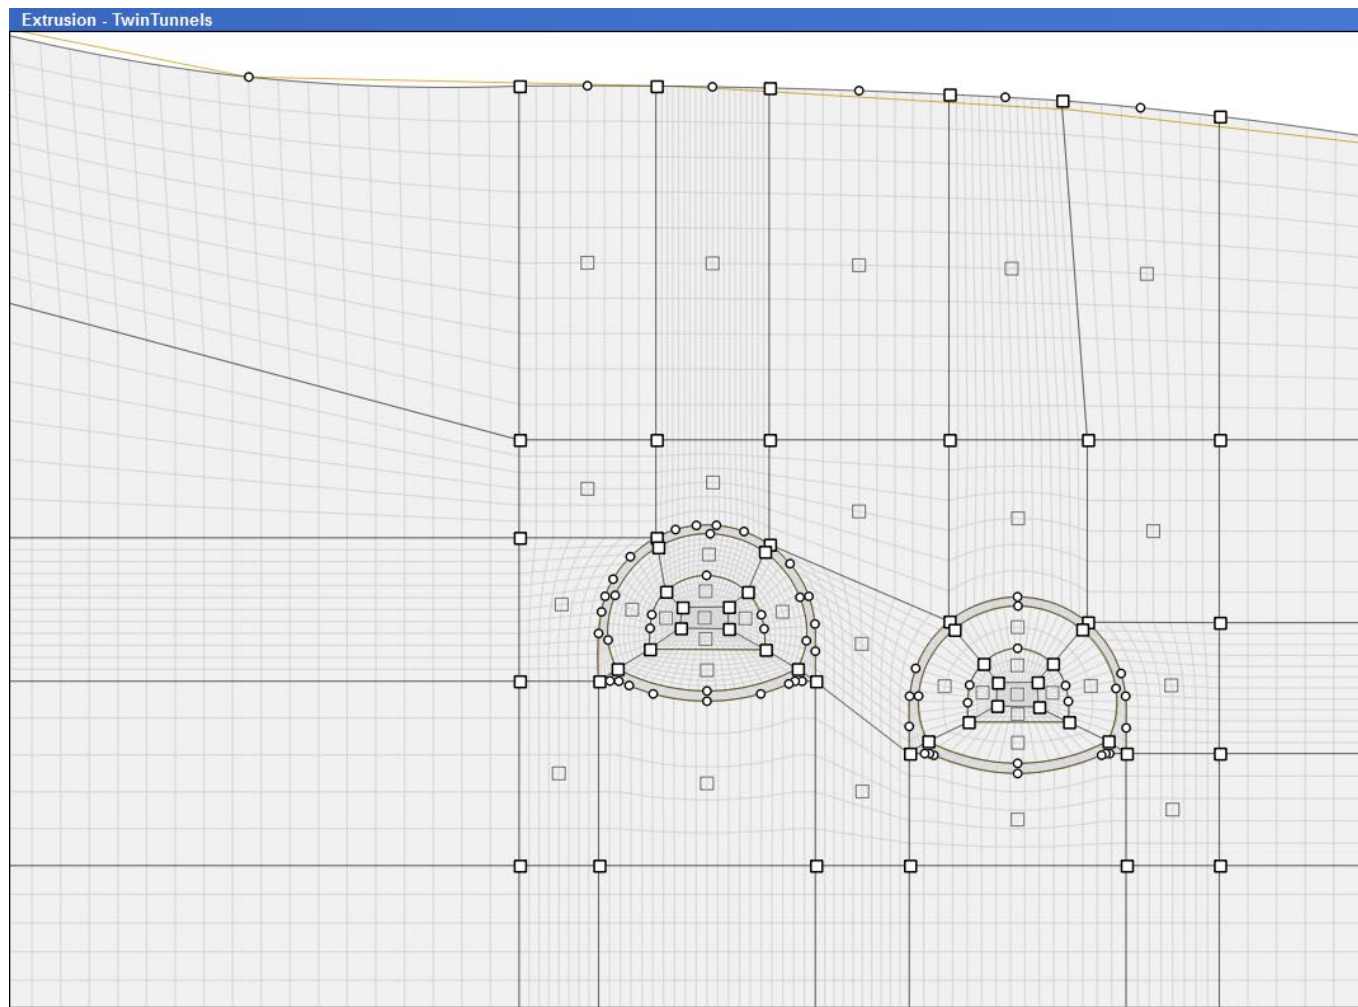

```
Edit first.dat
1 model restore "geometry"
2 model large-strain off
3 ; Constitutive Model and Properties
4 zone cmodel assign mohr-coulomb
5 zone property bulk 65000 shear 30000 density 2.0
6 zone property cohesion 10 friction 34 tension 1.0
7 ; Boundary Conditions
8 zone face apply velocity-normal 0 range group "West" or "East"
9 zone face apply velocity-normal 0 range group "North" or "South"
10 zone face apply velocity-normal 0 range group "Bottom"
11 ; Initial Conditions
12 model gravity 9.81
13 zone initialize-stresses
14 ; Solve to initial equilibrium
15 model solve
16 model save "initial"
17 ; Excavate Tunnel
18 zone relax excavate range group "Space"
19 ; Solve to equilibrium after excavation
20 model solve
```

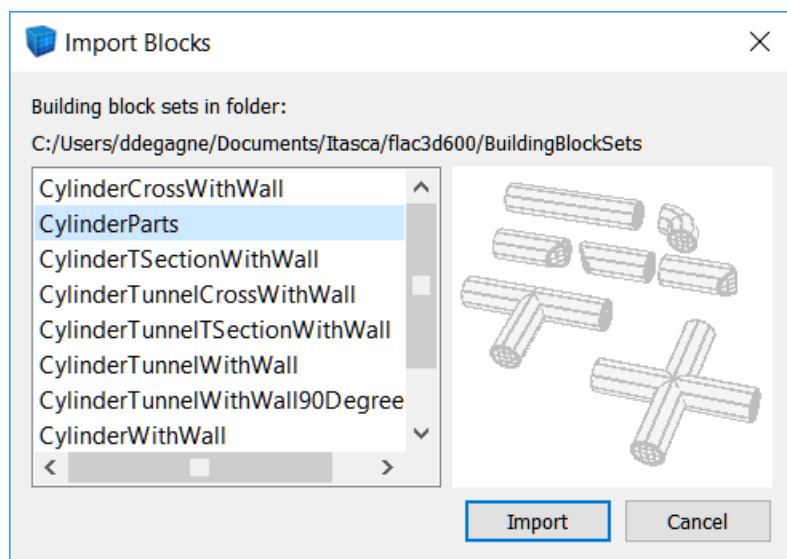

FLAC3D for New Users

- What is *FLAC3D*?

- What's next?

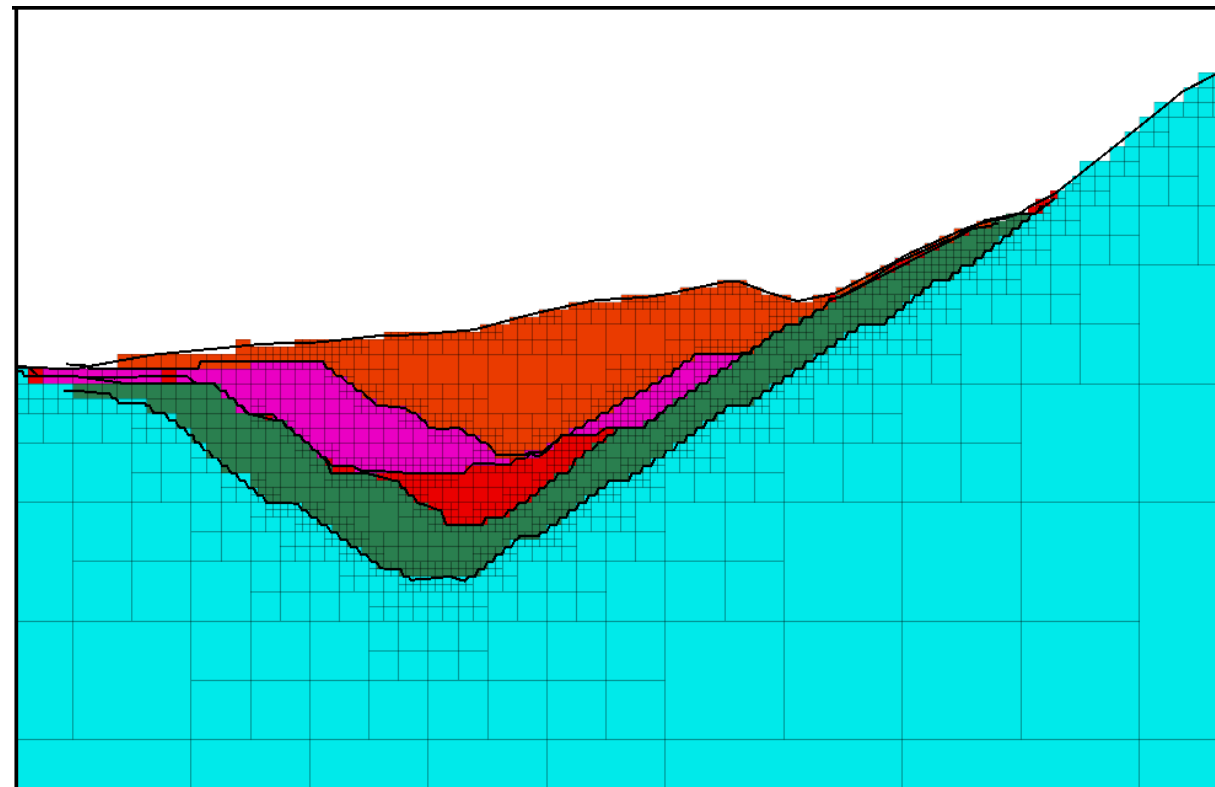

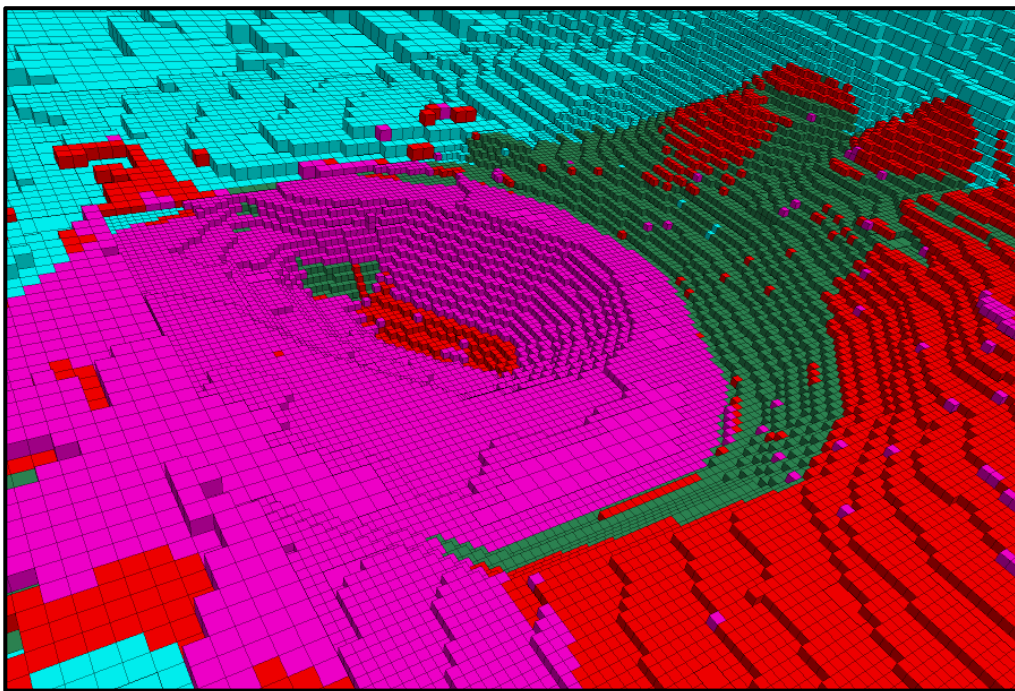

Model Building: Extrusion

Model Building: Building Blocks

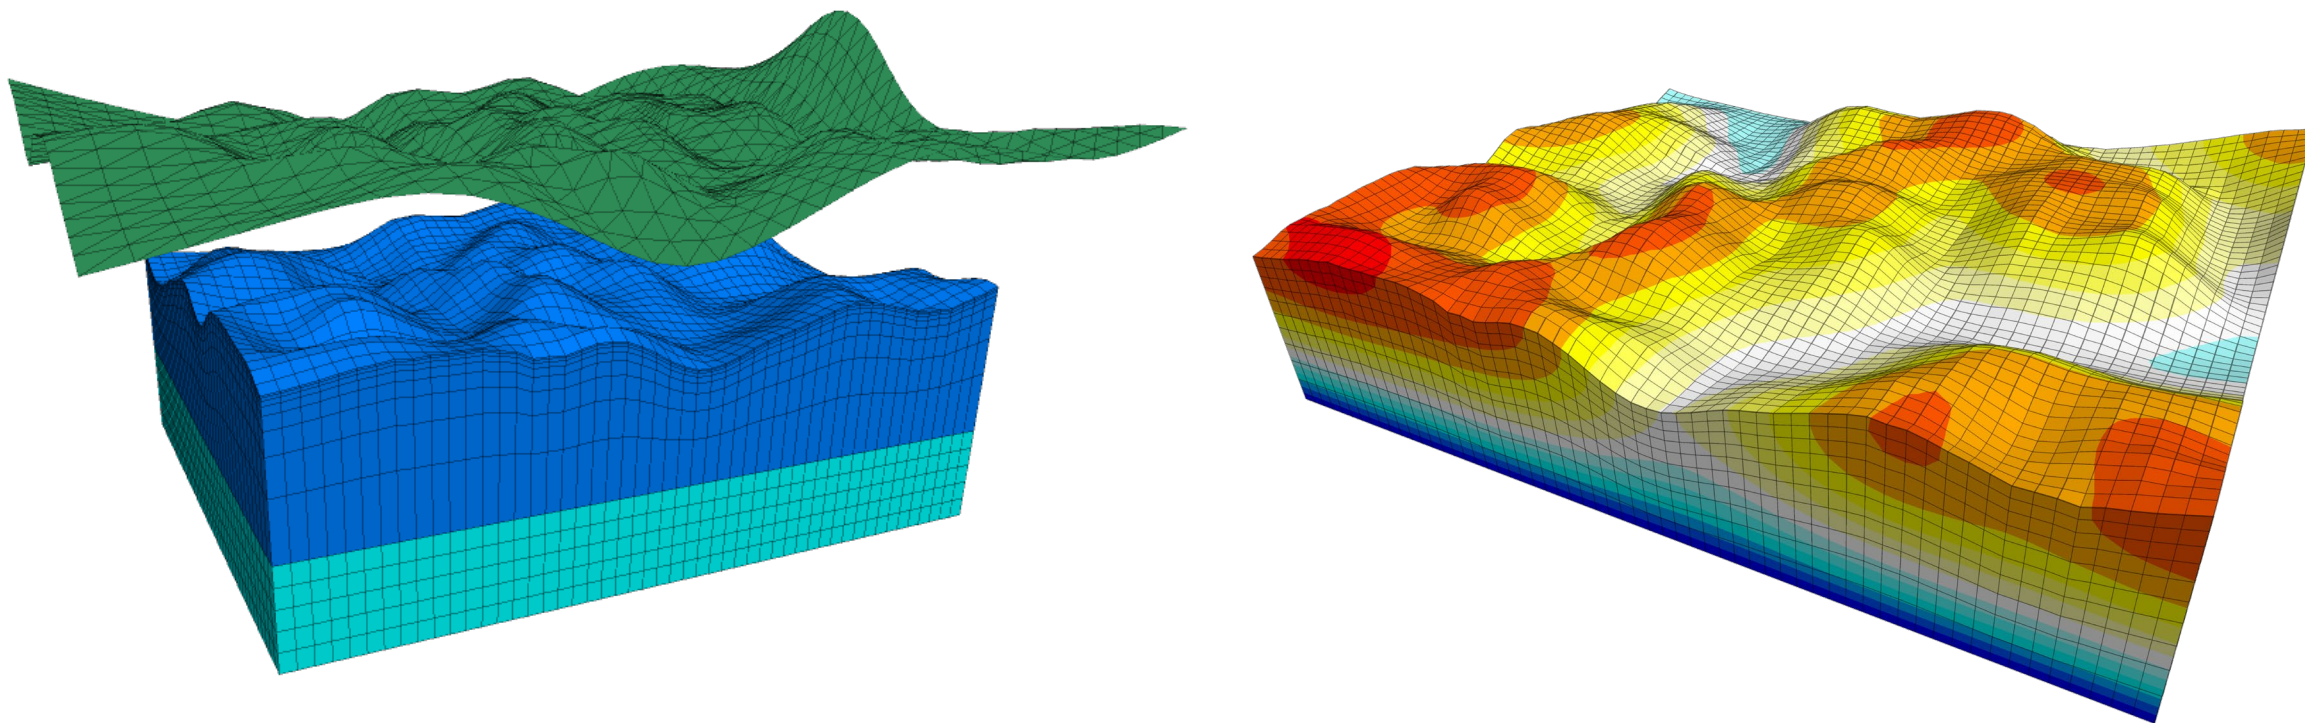

Model Building: Geometric Surfaces

- Densify zones close to imported surfaces
- Name zones according to position relative to surfaces

Model Building: Geometric Surfaces

- Fit zones to an imported topographic surface

Mesh Import from Other Software

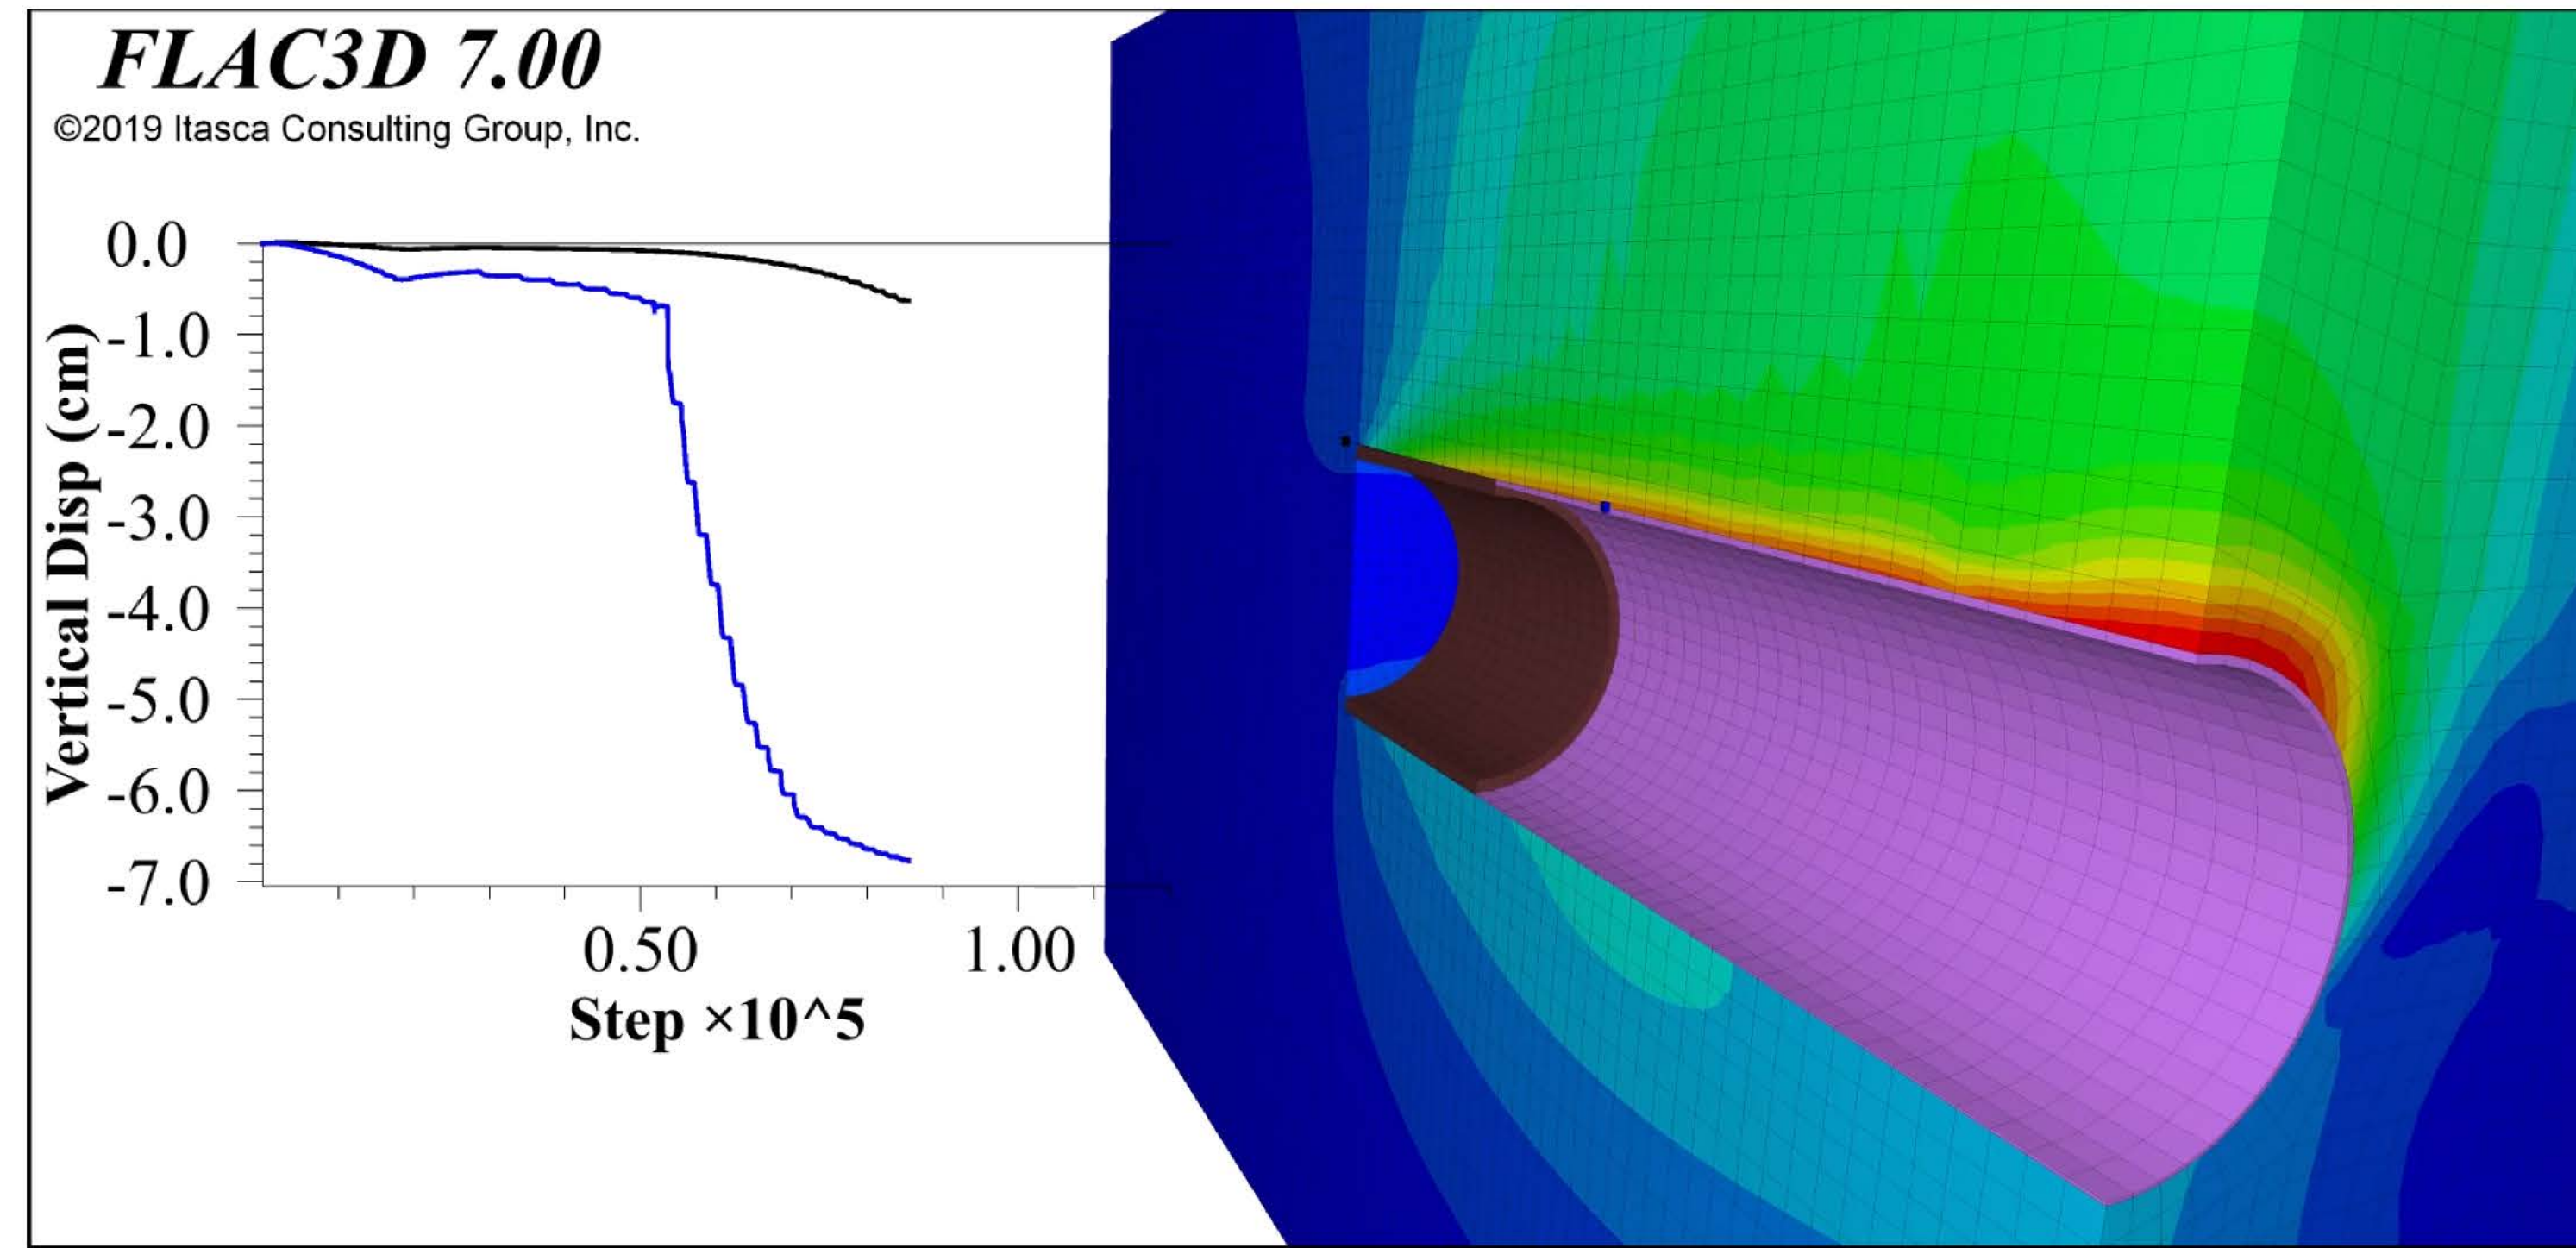

Model Manipulation

- Model pane allows for selecting volumes or surfaces and
 - ❖ Assigning names
 - ❖ Assigning constitutive models
 - ❖ Densifying zones (increase resolution)
 - ❖ Creating interfaces (faults/joints)
 - ❖ Creating structural elements (liners)

Loading, Excavation and monitoring

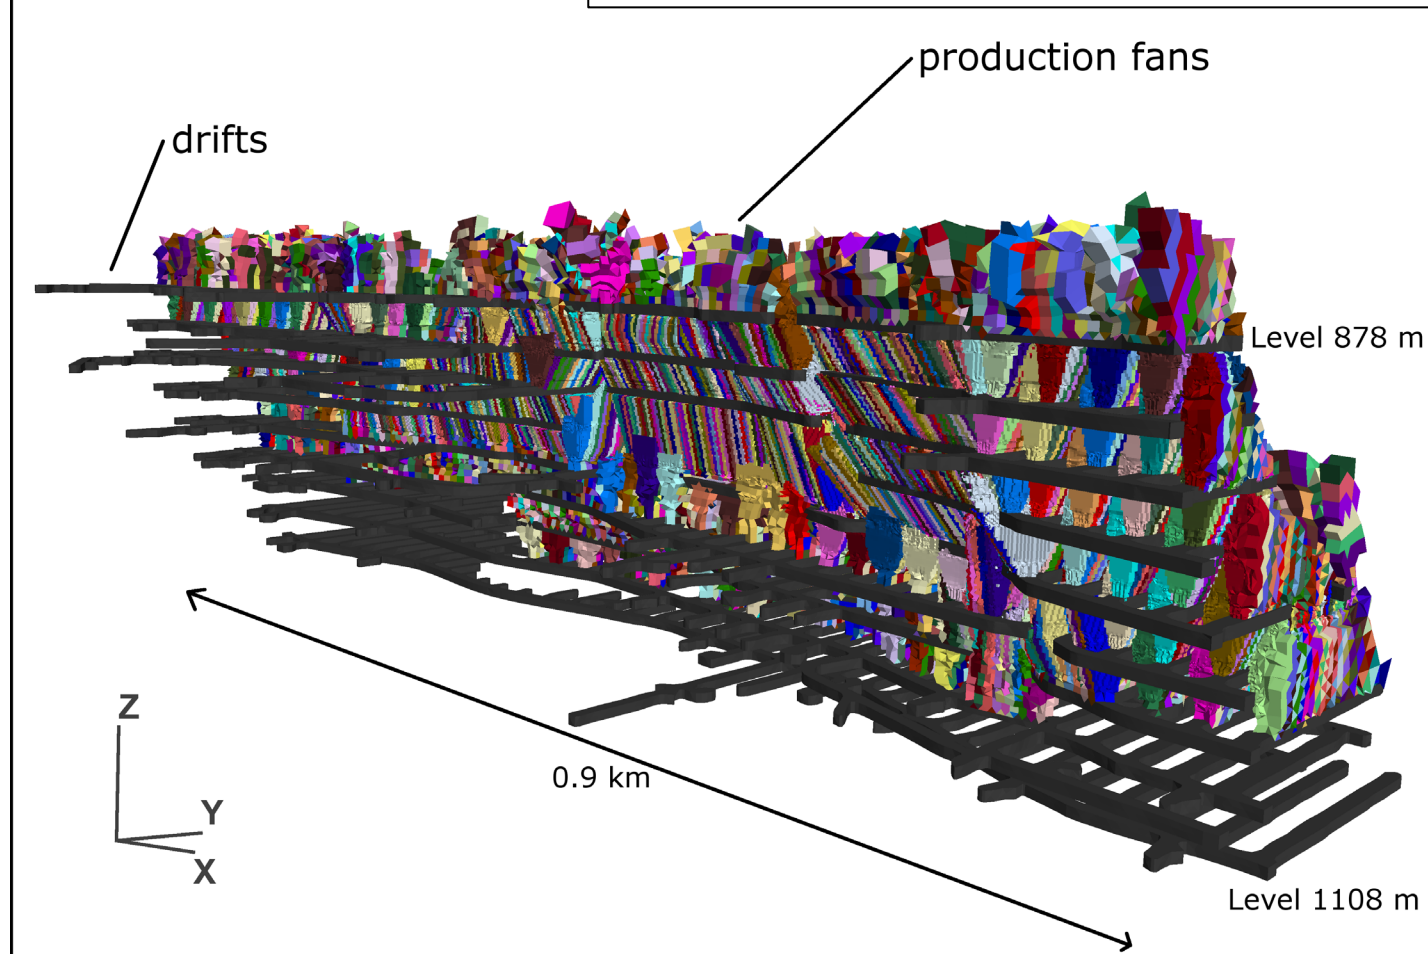

- Time-varying loads may be applied
- Complex staging of excavations possible
- Can view results as calculation progresses

Staged Excavation

Main Features: Fluid Flow

- Effective stress (water table)
- Steady-state flow
- Transient flow
- Partially saturated flow
- Couple fluid flow analysis to mechanical model (two-way coupling) as well as to **dynamic** and **thermal** analyses

Dam model with impounded water saturation contours shown

Main Features: Structural Elements

- Six forms of ground support:
 - Beam
 - Cable
 - Pile
 - Shell
 - Geogrid
 - Liner
- Can be joined to one another and/or the grid
- 2D structural elements (shells, geogrid, and liners) can be interactively defined using the **Model Pane**
- Structural element geometry can be imported from CAD software via DXF or STL files

Main Features: Dynamic Analysis

- Analyze earthquakes, seismicity, mine rockbursts, liquefaction, etc.
- Input acceleration, velocity or stress waves as boundary conditions
- Absorbing and free-field boundaries
- Can be used with structural elements and groundwater.

FLAC3D 6.00

- Elastic model
- Deformations shown 250x
- Iso-contours of displacement for 1 mm (red) and 2 mm (blue)

Main Features: Constitutive Models

- 26 mechanical and 9 creep models built-in
- Create your own constitutive model as a plug-in using C++
- Library of User Defined Models on the website
<https://www.itascacg.com/software/udm-library>

- Null
- Elastic, Isotropic
- Elastic, Transversely Isotropic
- Elastic, Orthotropic
- Drucker-Prager
- Mohr-Coulomb
- Ubiquitous-joint (UBJ)
- Strain Hardening/Softening
- Bilinear Strain Hardening/Softening UBJ
- Double Yield
- Modified Cam-Clay
- Hoek-Brown
- Modified Hoek-Brown
- CYSoil
- Simplified CYSoil (CHSoil)
- Caniso **NEW in 7**
- Plastic Hardening (PH) **UPDATED** (small strain)
- Mohr-Coulomb Swelling
- Mohr-Coulomb Tension
- NorSand **NEW in 7**
- Soft-Soil **NEW in 7**
- **P2PSand NEW in 7**

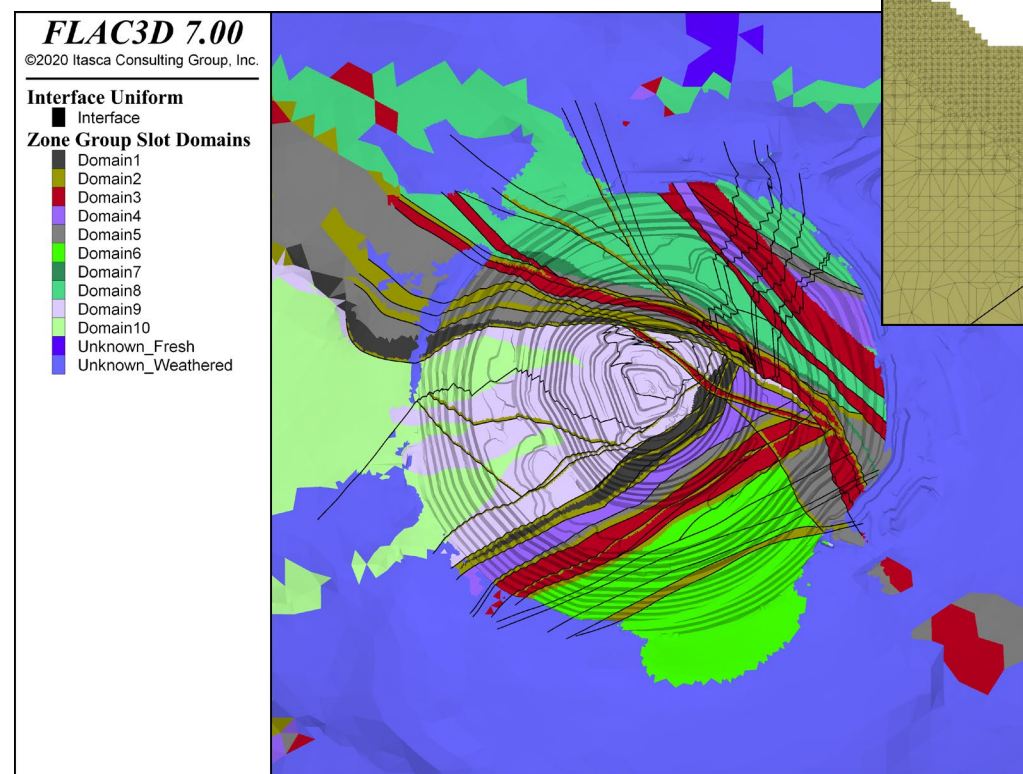

Main Features: Scripting

- Both *FISH* (*Flac*-ISH) and Python are fully integrated in *FLAC3D*
- The ability to combine model-creation commands with scripting in Itasca software is tremendously powerful
 - ❖ Parameter studies
 - ❖ Automating model sequences
 - ❖ Modification of physics
- *FISH* is multi-threaded
- Python includes scientific, mathematical and UI modules

```
Edit ground_freezing.fis
1 program call 'freeze_zone'
2 fish operator ground_freezing(zone)
3   if zone.isgroup(zone,'frozen','state') then return 0
4   if zone.temp(zone) > 0.0 then return 0
5   freeze_zone(zone)
6 end
```

Other Features

- Interfaces (Joints and Faults)
 - ❖ Interfaces can shear and separate/close
- Discrete Fracture Network generation
- Thermal analysis
- Creep
- Large strain
- Coupling with *PFC*

FLAC3D for New Users

- What is *FLAC3D*?
- How it works
- Features
- Demo
- **What's next?**

What's Next

- Cloud computing
- *FLAC2D* → 2D version of *FLAC3D* (coming 2022)
- Improved GUI – more user-friendly
- Cluster version (parallel computing)
 - ❖ Linux
- And more!

Resources

- Online documentation: <http://docs.itascacg.com/>
- Examples: <https://www.itascacg.com/software/support/examples>
- Video tutorials: <https://www.itascacg.com/learning/tutorials>
- Download demo version: <https://www.itascacg.com/contact-itasca/demo-downloads-request>
- Spring training courses: Online for 2021. Details coming soon.

Thank You

- A survey regarding features you would like to see in *FLAC3D* will be sent out after this webinar
 - ❖ We appreciate your responses
- A recording of this webinar will be made available to all registrants shortly
- Questions?
