Project Engineer

Project Experience

Civil Mining Engineer from the University of Santiago of Chile, performs his end-of-degree project analyzing a support system on a laboratory scale which has self-supporting capacity in order to establish relationships between the main variables that define the physical behavior of the model. Also, UDEC of Itasca was used to observe the behavior of the stresses within the rock mass. He worked in the rock mechanics laboratory (CGEM) preparing and executing destructive and non-destructive geomechanical tests on intact rock. rock.
